

Patterns

by Kay Stanton

Patterns in an insect's stride
Patterns in the sky
makes a curious mind get up to
try to find out why

Spirals in a pine cone's spine
A fractal's design
Patterns seldom
follow a straight line

Open your eyes and you will find a way.
See tomorrow with what you know today.

Larger than a galaxy
Smaller than a spore
The human mind is built just right to
Want to find out more

Patterns in an insect's stride
Patterns in the sky
makes a curious mind get up to
try to find out why

Open your eyes and you will find a way.
See tomorrow with what you know today.
